

Please reject the NAB's petition 04-160. I travel a lot and use the traffic and weather channels on XM radio all the time I can safely travel without trying to find different channels along the way. I don't have to keep playing with the radio while driving making it much less hazardous. I don't know how many accidents are caused when people are tuning the radio but I'm sure it is substantial. Why would they not want to help cut down on that number.
